

Importing KMZ Map Data to Your Mobile Devices

This user's guide will describe how to download and install KMZ map data to your smart phone and tablet. You must first select and download the GPS app that will provide the basemap and the GPS features that you desire. This guide briefly discusses Google Earth and Guru Maps for iOS Android but there are many others that may also display our trail data. These GPS apps are available in the Google Play Store and iTunes Store.

After placing your order on the website, you will receive a confirmation email. The email contains a link to your Download. You can also access the Download by signing into your account using the [Sign in](#) button and selecting Completed Orders.

Download the .kmz file to your smart phone or tablet. The download can be stored in your Google Drive or Dropbox cloud storage or launched directly to one of the GPS app described below.

Google Earth Mobile

The [Google Earth mobile](#) App for Android and iOS can be downloaded from the Google Play Store and iTunes Store. This app is not recommended for use out on the trail because it is not a true GPS app but provides a great tool for using in the camp or restaurant and can be used to display trails on the [NERFC snow depth map](#).

Guru Maps for iOS and Android

[Guru Maps](#) is a detailed and easy-to-use offline vector map application for iOS devices. No internet connection needed. Download a map of the entire country in one click. Record your trips and monitor your real-time speed, distance and time traveled. Bookmark your favorite locations for quick access. An online [iOS User Manual](#) and [Android User Manual](#) is available from the app developer.

Download the free app from the Apple store to your iOS phone or tablet. Note: some features require in-app purchases. Once the KMZ file is on your device it can be selected and opened by the Galileo app. See the [X Package User's Guide](#) for additional information.

Push the KMZ file to the Guru Maps app.

Guru will launch and display your trail map data.

Select the "Save to one collection" option to combine trails and map points into a single collection.

Change the name of the collection if you prefer.

Set the collection to the "Default Collection" if you want it displayed all the time.

Press the **Settings** icon at the bottom of the app.

Press Download Maps to select your basemap.

Press **Map Source** and select Vector Map.
